

World best photo editor man

Continue

World best photo editing. World best photo editor person. World number 1 photo editor. World no 1 best photo editor.

Sorry, ladies, but when it comes to questionable online information, it looks like men have the upper hand. A new study breaks down Wikipedia users by gender — and, whether it’s reading or writing, this is one domain the dudes definitely dominate. The Wikipedia Gender Gap The study, conducted by the Wikimedia Foundation and previewed in a Wall Street Journal blog, finds an overwhelming 87 percent of Wikipedia contributors are men. Even when it comes to simply browsing and reading, the ratio still skews toward the guys: Sixty-nine percent of Wikipedia readers are male, the study indicates. So what gives? According to the research, guys may be more altruistic and keen on getting the facts right — at least, when we’re talking about community-driven online encyclopedias. About 70 percent of contributors say their main motivation is sharing accurate information. (The other 30 percent, unfortunately, seem hell-bent on sharing inaccurate info. All the color-coding in the world probably can’t stop them, either.) Some other highlights from the research: • The average Wikipedia-using guy is 26; the average Wikipedian woman is 24. • About a fifth of the users hold a graduate degree. • The main reasons people don’t contribute are lack of time (translation: better things to do), satisfaction with simply reading entries (translation: better things to do), and lack of knowledge on how to actually edit the pages (translation: better things to do). The complete study is set to be released in November, after which point a Wikipedia page about it will presumably surface...and soon thereafter be desecrated with erroneous information. JR Raphael regularly mocks technology at eSarcasm, his new geek humor site. You can keep up with him on Twitter: @jr_raphael. Somehow it took more than twenty years to honor a man who saved us all.If you were alive on September 26, 1983, when I was 12 years old, you almost didn’t make it through the day. If you are too young to have lived that day, you were almost never born.Accounts vary, as the facts of historical events often become jumbled over the years. What we believe we know for fact, if there is such a thing in history, is that there was a man in a bunker whose inaction saved the world from a full scale nuclear war. His name is Stanislav Petrov, he was a lieutenant colonel in the Soviet Air Defence Forces.The Soviets, whose scientists were considered extremely honorable and elite human beings, had recently put into place a new system to detect missile launches—first strike type missile launches. The system was largely untested, but with the arms race constantly escalating during the paranoid time of the Cold War, there wasn’t always time for second guessing. The Soviet Union and the United States were both desperately keen on keeping the upper hand—as well as maintaining the sickening notion of “mutually assured destruction.” MAD. The most appropriate acronym ever in all of history.Lieutenant Petrov was in a bunker monitoring for what every Soviet feared: a US first strike. To his surprise, it happened. A missile. Another. More. A total, according to some accounts, of five nuclear warheads were dashing toward the Soviet Union.There were protocols to follow. There were buttons to push. There were launch officers to alert—the only appropriate response to a US first strike was full scale retaliation. As hundreds of Soviet missiles filled the air, the US would have countered with everything it had.The survivors would be the unlucky ones. Continued... We’ve selected the very best free photo editors that are a cut above the basic functionality you’ll find in native software.The best laptops for photo editingProfessional-grade photo editing software can be expensive - very expensive. Go-to photo editor Photoshop has a hefty subscription and most of its key rivals will hit you in the pocket for their software.However, there are free photo editors that can perform more tasks than you think. Most are in the form of apps for mobile or tablet, but there are also desktop and web-based applications which will perform very capably. Here goes...01. GIMP GIMP is a popular open-source photo editing software Platform: Linux, Windows, MacAn open-source photo editor that debuted on Unix-based platforms, GIMP stands for GNU Image Manipulation Program. Today it’s available in versions for Linux, Windows, and Mac. GIMP offers a wide toolset - everything you’re accustomed to is within easy reach, including painting tools, colour correction, cloning, selection, and enhancement.The team that oversees development has worked hard to ensure compatibility too, so you’ll be able to work with all the popular file formats without any trouble at all. You’ll also find a very capable file manager built in, along similar lines to Adobe’s Bridge.Chasys Draw IES is not so much a photo editor but a full suite of editing applications. The very capable layer-based image editor has a stack of essential features, including several paint and drawing tools, special effects, extensive colour and lighting adjustments, Photoshop plugin support, and much more.Throw the rest of the suite into the mix and you can create animations, CD or DVD labels, icons and cursors, or capture videos of desktop activity. With a RAW file processor, image viewer and converter also included, Chasys Draw IES is UAC aware and is designed to take advantage of multi-core processors, touch-screens and pen-input devices, which all adds up to an impressive free package.03. Photo Editor by Aviary (opens in new tab) Aviary strikes a balance between serious photo editor and playful app Platform: Windows 8, iOS, AndroidAviary is a very pleasantly designed app that strikes the perfect balance between serious photo-editing and playful photo-decoration functions without looking bland or childish. Perhaps because it’s quite new, the selection of filters and stickers are fairly small, so any future updates would give this app great room for play.04. Paint.net For photo editing, free Windows tool Paint.net is an excellent option Paint.net is a surprisingly capable and useful tool, available completely free of charge. The focus is on ease of use, and there’s a definite tendency towards photo editing rather than artistic creation. That said,

there are a range of special effects available, allowing you to easily create fake perspective, blend and repeat selections, and so on.A good range of selection tools, support for layers, and adjustments such as curves and brightness/contrast mean that Paint.net is a great alternative to Photoshop for photo editing, especially if you can do without some of the more recent additions to Photoshop's toolset.05. Sumopaint: Sumopaint works in the browser, and requires Adobe Flash to use Platform: Web browser (requires Adobe Flash Player)Sumopaint is a highly capable browser-based image editor. All the standard features you'd expect from a desktop tool are present and correct, although you need the Adobe Flash Player to use this tool, so you're not going be using Sumopaint on your iPad.The standard range of tools and adjustments you'd expect are all included. Brushes, pencils, shapes, text, cloning, gradients, etc are all quickly accessed from the Photoshop-esque floating toolbar. It can also open saved documents from your hard drive, making Sumopaint a perfectly viable option for editing and reediting.There are, however, limitations that will put off some users. The most important of these is that the editor appears to be RGB only, limiting its use to screen-destined artwork only. No CMYK. Lab or other colour models to be found here.06. Pixlr (opens in new tab) Pixlr's mobile photo editing software comes with more than 600 effects Platform: iOS, Android, web browserPixlr claims to be "the most popular online photo editor in the world", which may have something to do with the fact that it's free. But it also boasts more than 600 effects, overlays, and borders and lets you do all the main things you'd expect from a photo editor, from cropping and re-sizing to removing red-eye and whitening teeth.And if you're used to using Photoshop, then you'll find Pixlr's user interface easy to pick up quickly, as it's very similar.07. PhoXo (opens in new tab) PhoXo is described as a 'mini-Photoshop', and with good reason: features include layers, undo, over 50 special effects, batch processing, and a wide variety of useful and powerful tools for selecting, crop, painting, retouching, measuring and navigation.Particularly useful for creative pros is the ability to add a custom watermark to an entire folder of images, but the whole family will enjoy the thousands of free clip-art, frames, patterns, textures and shapes, image transformations, effects and more.08. Pixbuilder Studio (opens in new tab) PixBuilder Studio eschews novelty features for what it likes to describe as "professional quality features". So you get the likes of layer support, crop, resize and rotate options, cloning, colour management tools, sharpness and blur filters and more.The application also includes customisable keyboard shortcuts to improve your productivity and the instantly familiar interface is a pleasure to use.Related article:The best laptops for graphic design (opens in new tab) Play All Follow Matador onVimeoFollow Matador on YouTube Adventurer and filmmaker Felix Starck cycled 18,000km through 22 countries and four continents in one year. Untrained, with 55kg of baggage and camera equipment, he cycled into the unknown. Setbacks such as pneumonia, separation from his travel partner, a robbery in Cambodia, and the death of his grandfather made the journey tortuous at times. But he maintained his drive to complete the journey and was rewarded with incredible hospitality from people around the world. He had his share of surreal moments as well: wild elephants in the jungle, New Year's Eve in Bangkok, geysers in New Zealand, Times Square in New York. Bottom line: He discovered the world on his own terms. * * * AZ: Who were you before your journey? FS: Actually, everything was perfect — but something was missing. The meaning of life? Perhaps. I've always been an adventurer, but this was really my first big trip. What made you decide to just go? I've always wanted to travel the world and break out of the system for a while, but I didn't like the usual backpacking way so I thought of something else. In the beginning I was joking around with my friends and nobody was serious about it — the day after I woke up and wanted to know if I would be able to actually do this. So I started to plan this trip and three months after I was on the road heading east towards Turkey. Now I ask myself a lot: Why did I do this? To meet people and get to know different cultures in this world — I definitely did that! It was the best decision of my life. Did you plan the trip ahead or was most of it spontaneous? At first I wanted to be on the road for two years, but after a few days I realized planning a trip like that in advance is absolute nonsense. Strangely, you feel much more relaxed if you do not know where you will be in the going in the next few days. Of course you need a direction in which to go, but I just went where I felt like, and if I liked it, I stayed for a while. The journey is the reward. Filmmaker Casey Neistat said, "The adventure doesn't begin until something goes wrong." I totally agree. What were the most difficult things you had to deal with? Being alone for such a long time wasn't easy at all. I had company now and then from my family and some friends, but only for a short periods. I learned on this trip, that I'm not the guy who can travel solo, but I still wanted to finish it and that's what made me stronger. Asian countries are pretty tough to cycle because of the crazy weather and bad traffic. One day I cycled in the north of Cambodia when it was 44 degrees Celsius in the shade. But I was under the sun and had to endure over 60 degrees Celsius heat! I drank over 18 liters of water that day and almost collapsed. Most truck drivers in Cambodia barely sleep because they need to make money to survive. They take drugs to keep themselves awake. This is when it gets too dangerous for a cyclist like me. Sometimes I didn't even hear them coming because of the loud headwind. Suddenly without any warning, this huge truck just passes you at 100km/h and only about 20cm distance. Sometimes I'd fall off the bike because of the wind it generates. Really not a great area to cycle in, but those moments made it unforgettable. I was also robbed by the police in Cambodia once. I stopped at a police station to ask if I'm allowed to sleep here and they agreed. I kind of had a weird feeling about the situation but put up my mosquito net and just slept. Next morning five cops came and wanted all of my cash — \$400 total. They took it, threw my wallet in the sand, and told me to get lost. They even said "Thank you." It is important to not lose trust in the nation after an incident such as this, because there are idiots everywhere. But I had so many good experiences that I barely think about the hard ones. What were the best realizations or lessons you've learned? There were so many, but after all I gotta say the kindness of strangers everywhere in this world. I got invitations countless times and this was the reason that kept me going. First day I left home, an elderly woman saw me setting up my tent and stopped me. She invited me to her guest room, made dinner and breakfast for me and we are still in contact. I had a hundred other cases like this. Unbelievable how kind our species is. I always try to enjoy the moment. This trip made me the man I am today — more relaxed, joyful and generous than I was before. There is so much misery in this world, especially in countries like Macedonia, Serbia, Laos or Cambodia, but the people there are still happy and smile at you and wave when you pass them on the bike. Here in Germany, most people are career-oriented and everyone lives in a system where it's more about what you have than what you are, but I can't live that life anymore — not after such a trip! Did you find what you were looking for? Definitely — I'm sure I wouldn't have found it if I stuck to my "normal life"! The 70-minute documentary captures his epic journey and will be available soon as a DVD and as a download at www.pedal-the-world.com. The trip was completely funded by Felix, and he has pledged to donate all profits to the World Wildlife Foundation.
