

Agile scrum master study material

Contemporary work culture and requirement involves extensive collaborative work among cross-functional and even cross-location teams, leading to increased complexity in the work systems. Agile methodology, however, was built to suit smaller and simpler work systems and teams. Hence, to be able to reap the full benefits of Agile, it needs alterations to be applicable at-scale and enterprise-wide. Agile is a popular tool for optimizing a value chain, allowing for speed, quality control, and effective communication with customers. The transformation of Agile requires improved structures and processes. Additionally, the transformation itself has to be as seamless as possible. Such a transformation has resulted in the development of the Scaled Agile Framework (SAFe). This is applicable on an enterprise-wide large scale. Firstly, Agile or even Lean approaches need to be applied independently within each level or sub-system within an organization. This allows a smoother transformation. The framework then focuses on aligning each of these independently agile teams and creating systems of collaboration among them for an enterprise-wide impact. Most recently, version 5 of SAFe has been introduced, and this offers improved mechanisms for strategy development, its implementation, and management. the competition. What is SAFe agileSAFe is a tool and guideline for the implementation of Agile-Lean principles at a whole-enterprise scale. Being Lean, it is an inherently simplified and lightweight mechanisms and principles into the organization's management software. The framework is an opensource kit, available online for all. The SAFe framework has three segments are - Includes principles of both, Lean and AgileProvides guidelines for entire value-chain and organizational operations, including human resource managementThe included principles are targeted towards affecting all members of the organization. What is Agile SAFe certificationBeing an openly available tool, any organization may implement it. However, some guidance and training may be required for two reasons. Firstly, organizations may need some suggestions and practical strategies for implementing the guiding principles of scaled agile framework training. Secondly, the reputation of the creators of the framework would be at-stake and hence, it would be preferable for them if organizations implement it as effectively as possible to reap maximum benefit and provide positive feedback. Hence, the implementation of Agile SAFe is preceded by a two-day SAFe agilest certification training program. This program is relevant for organizational leaders and those who have been given the responsibility of implementing Agile in their enterprises. The training covers the key principles of Lean and Agile, systems approach, strategy development, and operations flow. The training is centered on practical approaches and discussions based on experiences, beliefs, and knowledge of participants. Nuances of agility in teams, technology usage, and workflow within the value-chain. Customer satisfaction is one of the key goals of businesses and is also a reason for movement towards Agile business. Hence, this aspect is also covered deeply in the training, with practical and experiential activities. Participants are oriented towards PI Planning, Agile Release Trains (ARTs), and Lean portfolio management. The training is a stepping-stone towards successfully clearing the scaled agile certification examination, to become a certified SA. Such individuals may also act as consultants for a different organization, giving ideas to them, in turn, for introducing SAFe Agilists too are in-demand. Since the tool is freely available online, authenticity may be an issue and unauthorized certifications may also be available, hence hampering the quality and reputation of the original. The original and registered Scaled Agile Framework thus has authorized a specific body to provide and approve certifications. This certifying body is Scaled Agile Framework thus has authorized a specific body to provide and approve certifications. Inc., have the authentic quality, reliability, and acceptability in the business world. Professionals certified by this authorizing body are accepted world over, by organizations for their in-depth knowledge of Lean-Agile principles and skills for customized practical approaches. Scaled agile training is thus the leading SAFe training.SAFe course details The Scaled Agile Professional Certification Program maintains the following three features - Maintaining the quality of the examination, by incorporating known best-practices, so that certification is valid and dependable. Managing the quality of the examination, by incorporating known best-practices, so that certification is valid and dependable. scale world-wide, hence promoting SAFe and making its presence available globally. Providing uniform quality but customized training, based on organizations and roles, continued hand-holding and on-job support, and creating a community of SAFe users. The SAFe users. The SAFe users. The safe certification training aims and learning goals for participants include – Ability to guide organizations in their transformative journey towards Agility using SAFeDeep understanding of Lean-Agile principlesAbility to apply Design Thinking to cater to customer needsAbility to transform value-chain processes to Agile product delivery and Lean portfolio management. SAFe training courses outlineUsing Technology for Business Agility – Understand SAFe as a mechanism for operations and objectively evaluate the effect of the listed 7 core competencies on agility.Lean-Agile Thought leadership – Understand the principles deeply and develop the ability to practically apply them at the whole enterprise level.Establishing Lean Portfolio Management – Developing a SAFe portfolio based on organizational strategy, along with a vision, flow, and value-chain. Agile Teams and Technology - Understanding processes for collaboration and Agile Release Trains (ARTs) Making the product delivery agile - Understanding nuances of customizations to meet customer needs, design thinking, and implementing strategies such as PI planning, prioritization, demand and development balancing, maintaining continuous flow, etc. Advantages of scaled agile framework ertification1. Universal AcceptanceThe Scaled Agile Framework (SAFe) is widely used and this usage is increasing exponentially. It is the most commonly used method for Agile implementation. Data suggests that, out of 100 Fortune companies of the US, at least 70 use SAFe. Hence, there is an ever-increasing demand for SAFe professionals. Professionals certified by the authentic certifying agency only are accepted and relied upon, as business owners would not jeopardize their enterprise by leaving such an important task to a less able person. 2. Career Opportunity or AlternativeSince the demand is high, professionals with certification may take this up as full-time work, being engaged with a SAFe-implementing agency, or establishing own consultancy. Such work may provide continuous learning opportunities and experience of workings of different organizations, as well as a chance of establishing contact with several companies.3. Enterprise-wide certification opportunityPackages and offerings are available in case an organization chooses to send all its employees for certifications. On the one hand, the certifying agency needs to understand the specifics of processes and needs of just that one organization, but gain several participants for its training program and examination, making the program cost-effective and less labor-intensive. On the other hand, the enterprise seeking certification for all employees will be able to ensure that all employees understand the new framework of the organization's functioning and work with a similar mindset, ensuring smoother and more collaborative functioning, requiring lesser handholding.4. Inclusion in a Community or platform. Being a certified SAFe professional automatically includes one in this community. Thus, it is like being a member of an exclusive worldwide prestigious club, which is accompanied with a digital badge, mentioning that the concerned person has successfully cleared the training and exam. These badges are recognized and coveted globally and can be used as signatures in e-mails, included in soft copies of resumes, business cards, and even social media profiles. Hence, it is a good tool to communicate this skill to others and generate possible business cards, and even social media profiles. to establish SAFe consultancy as their independent business. The process involved in getting leading SAFe certification. Prerequisite 5+ years' experience in the software industry, having participated in both, development and testing; experience of working in an organization to have knowledge of business analysis and project as well as value-chain management. SAFe Agilist course followed by a SAFe Agilist course followed by a SAFe Agilist course for obtaining certification as SAFe Agilist professional.Application After the completion of the actual certification exam, it is possible and highly recommended, that one practices some mock tests online since this facility is available for all. These mock tests are prepared with the knowledge of the actual test in mind, and hence provide a fair idea of the kinds of questions that would appear in the actual certification. Hence, the possibility of a successful attempt will increase drastically. Once ready to sit for the exam, a simple process of registration for the exam takes place, which too is fully online, and then the exam. SAFe agilist examHere is a brief glimpse of what the exam looks like - It contains 45 multiple choice questions only, which have to be answered within a given time limit of 90 minutes, without any assistance. These 90 minutes may be broken down for a maximum of 30 days. Beyond this period, it is possible to give the exam, but these will be registered as second, third, or fourth attempts and will have an additional cost each. The exam portal is accessible through the SAFe Community Platform, access to which will be gained after the successful completion of the two-day training. Scores SAFe 4 has 45 questions and you need to get at least 34 right and in SAFe 5.1 minimum 35 correct answers required to pass the examination. SAFe Agilist certification costThe SAFe Agilist training cost is set at 50,000 INR with additional GST. This cost includes the cost for the first attempt at the certification examination. The training is essential to access the exam portal and hence it is not possible to directly attempt at the certification examination. The training is essential to access the exam portal and hence it is not possible to directly attempt at the certification examination. The training is essential to access the exam portal and hence it is not possible to directly attempt at the certification examination. mentioned, further attempts of the exam will increase the SAFe certification cost by 50 USD, and then another further attempt will cost a further 50 USD. Why SAFe agilist training is quite useful and customized towards the exam and practical applications of the developed knowledge. It is suggested that, if one is not attempting the exam immediately after the training, then one should surely revise the content of the training and follow other suggestions - Revise the course content, which is available on the study guide on the community platform. This will provide some practical insights and a deeper understanding of organizational functioning. Go through sample questions provided on the platform to get an idea of the kinds of questions asked and prepare accordingly. Practice a few mock tests to get a feel of the actual exam and improve answering timing to avoid the need for further attempts. Final suggestion There is also a facility for attending a virtual live session, which is an online add-on training. It is advised to make the most of this facility as well, to have maximum possible preparation for the exam and perform well enough. Such rigorous training is essential since the course and exam have become quite popular given the increasing popularity of SAFe Agilist Certification in United SAFe Agilist Ce Training in Singapore Leading SAFe Certification course in Hong Kong SAFe Agilist Certification in UAE SAFe Agilist Training in Saudi Arabia Leading SAFe Agilist Certification in Canada Group Discount upto 15 % Scrum, an Agile framework has been picking up momentum in creating innovation and improving productivity across organizations. A high-performing Scrum Master is the main person responsible for steering the project in the right direction. The Certified ScrumMaster® (CSM®) course boosts your confidence in implementing the Scrum framework effectively in organizations. CSM® certification- Adding value to your careerAs a Certified ScrumMaster, you will be known as being part of an elite group engaged with Scrum Alliance. The members of Scrum Alliance are meant to be Scrum specialists, guiding the project teams to success. Here is why CSM® certification should be a part of your skill set:Based on the recent salary survey by Ziprecruiter, the average annual salary for the Certification enables you to work across major companies like IBM, Tata Consultancy Services, CapGemini, Honeywell, BOSCH, Accenture, Deloitte and many more in several job roles, such as: Scrum MasterDelivery LeadAgile Scrum MasterProgram ManagerAgile CoachAutomation. Today, most of the IT as well as non-IT industry majors are hiring candidates who are familiar with the Scrum framework. A Certified ScrumMaster® can upscale an organization in the following ways: Guide team members through the productsParticipate in the team activities with ease and also learn how to own a taskResolve the impediments and enhance the team's collaborationAct as a change agent and enable a culture in which teams can flourishBecome a servant leader for Scrum teams that are involved in developing high-end products Scrum framework believes in 'self-organization'. Making a career in Scrum teams that are involved in developing high-end products Scrum framework believes in 'self-organization'. environment.Earn the skills that make an individual immune to internal and external distractions.Become self-motivated to escalate the performance of the team.Get more job opportunities in IT as well as non-IT organizations with a good pay. Step 2: Take the 2-day CSM course and get instructed by Certified Scrum Trainers® (CSTs). Step 3: SA will send you a link to create login credentials on successful completion of course. Step 4: Click on the link received from Scrum Alliance and create your own login credentials. Step 5: Take the 1 hour online CSM® test which comprises of 50 MCQs by using those credentials. Step 6: Score a minimum of 74% to pass the CSM® test, after completing the course. Step 7: Once the test is cleared, you will be requested to accept a license agreement. Step 9: You have to renew the certification once every two years. There is no set of eligibility requirements to attend this Scrum Master Certification course and it can be taken by freshers or professionals who want to: Further their career in project management. Deepen their understanding of Scrum. Our experienced CSTs deliver training in such a way that is suitable for both novice and experienced CSTs deliver training in such a way that is suitable for both novice and experienced contract of the career in project management. using Scrum in a real-world context, in order to get the most from the training. You can do this by following the 1-day Agile and Scrum teams in using Scrum teams in using Scrum terminologies, various concepts, and the complete Scrum process. Understand various roles involved in Scrum Master core competencies and protect the team from internal and external distractions. Daily Scrum, Sprint Review, Sprint Review, Sprint Backlog, Definition of Done. Facilitate the Development Team, Product Owner, and the organization while responding to change. Inspect and adapt and increase transparency in each of the Scrum events and make the team's work visible. Learn to help the team members work collaboratively and follow every Scrum process involved in it. Get familiar with the 12 principles and 4 values stated in the Agile Manifesto through our popular in-class activity- "Draw and demonstrate". Herein, you will be asked to form groups and illustrate all 12 principles pictorially. What you will be able to- Explain the 12 principles and 4 values listed in the Agile Manifesto. Demonstrate the benefits of "responding to change" in Agile over "following a plan" in traditional project management. Describe how the Scrum artifacts, events, and roles. List and explain the three pillars in Scrum — Transparency, Inspection, Adaptation. Explain the differences between framework and methodology. and understand why Scrum is called a framework. List 5 ways to develop an Agile mindset. Illustrate 2 differences between Agile and Scrum with role-based activities. Each group will play a simulation game called "candy catch" that will have three iterations. The Scrum Master and help the team achieve the highest target within the shortest time. What you will learnAt the end of this activity, you will be able to- Conduct a retrospective to list 3 techniques to improve the performance and turnaround time. Explain the roles and responsibilities of a Scrum Master and a Product Owner. List 3 differences between a Scrum Master and a Product Owner and understand why these two roles should not overlap. Discuss how a product owner acts as a bridge between the development team and the stakeholders. Understand why a Scrum Master is not an active participant but a facilitator in the Scrum Master roles and challenges Product Owner roles and challenges Product Owner roles and responsibilities. Development team roles and responsibilities Take part in the Scrum Paper Plane game and learn how the 5 Scrum ceremonies work. There will be 3 sprints, each lasting 15 minutes. You need to prepare the user stories that will cover the features and functionalities along with acceptance criteria. What you will learn At the end of this activity, you will be able to- Explain the "why" and "how" of sprint planning, daily scrum, sprint review, and retrospective. Understand why the scope and duration of a sprint goals and discuss 5 benefits of having a sprint goals. Understand how the Scrum Master and the Product Owner should coordinate with the team and list 5 points to improve such communications. Discuss 3 damaging impacts of sprint cancellation, variable sprint length) and understand how these impact the delivery and turnaround time. Topics covered Sprint planning Daily Scrum Sprint Review Sprint Retrospective Experience how scrum works in real projects with our simulation game "Crime Teller". The activity will be divided into 3 sprints, wherein the participants will activity, you will be able to-List and demonstrate 5 salient features of a well-formed product backlog (E.g. estimated, prioritized). Discuss 2 responsibilities of the Product backlog. The objective of having a product backlog and best approaches to product backlog refinement. Analyze and discuss the ideal time and capacity to be dedicated to product backlog refinement. Demonstrate 3 activities (E.g. budget and timeline, release schedule) that take place during a sprint review anti-patterns (E.g. budget and timeline, release schedule) that take place during a sprint review anti-patterns (E.g. budget and timeline, release schedule) that take place during a sprint review anti-patterns (E.g. budget and timeline, release schedule) that take place during a sprint review. Learn about Scrum life cycle by taking part in the "coin game". The participants will be linking ceremonies to create effective sprint goals. This module will focus on the common challenges in sprint execution and enable team members to improvise. What you will learnAt the end of this activity, you will be able to- Explain the difference between resolution meetings and daily standups. Explain the benefits of collaborations with product owners. List 3 demerits of over collaboration of the product owners. List 3 demerits of over collaboration of the product owners. List 3 demerits of over collaboration of the product owners. Execution Planning Flow management Resolution meetings Communication (Taskboard, Sprint burndown chart using story points, hours effort) Play the "Marshmellow Tower" game and learn more about daily scrum and sprint retrospective in real scrum projects. The tallest tower built with the minimum raw materials and in the shortest time frame will win. Acceptance criteria will be defined by the instructor. What you will learnAt the end of this activity, you will be able to- Explain the importance of 15-minute timebox for daily stand-ups. Describe 2 roles played by the Scrum Master, Product Owner, and the Development team in daily scrum. List the 3 critical questions pertaining to the daily scrum agenda. List 2 responsibilities of the Scrum Master, Product Owner, and the Development team during the sprint retrospective. Topics covered Activities in daily scrum Activities in sprint retrospective. Criteria with the "Crazy Juggler" game wherein you need to pass a fixed number of balls to non-adjacent team members within a certain time frame and collect them in a paper bag once marked as "done". What you will learnAt the end of this activity, you will be able to- Explain Definition of Done at three levels — user story (e.g. writing code), sprint, and release (e.g. preparing release notes). List 3 benefits of Definition of Done and explain why it can evolve over a certain period of time. Prepare a checklist (with a minimum of 7 entries) of an ideal DoD. List 5 characteristics of good acceptance criteria. Understand who all should be involved in drafting the acceptance criteria. List 3 negative impacts of not following the acceptance criteria. Topics covered Definition of Done for a release Definition of Done vs. Acceptance criteria Done vs. Done-Done. Acquaint yourself with the Definition of Ready with our Lego blocks game wherein the attendees will be asked to build a city out of Lego building blocks. The "definition of ready" checklist for the final deliverable will be asked to build a city out of Lego building blocks. The "definition of ready" checklist for the final deliverable will be asked to build a city out of Lego building blocks. an ill-formed Definition of Done. Identify at least 3 benefits of a shared Definition of Done for multiple teams working on the same product backlog. List 2 ways to improve Definition of Ready for sprint Play the self-organization game "Human Knots" by forming teams of 5-6. Groups where team members can untie themselves first win. The time frame for this activity will be decided by your instructor. Each team will have a Scrum Master and Product Owner chosen by group members. What you will learnAt the end of this activity, you will be able to- Define and understand the steps involved in release planning. List 3 benefits of a well-organized release planning. List 3 outputs of release planning output of Release planning output of Release planning for the steps in Release planning. List 3 benefits of a well-organized release planning. part in the ball point game. There will be 5 iterations and the number of points being expected at the end of this activity, you will learnAt the end of this activity, you will be able to- Define and understand sprint burndown chart. List 3 primary reasons to use a burndown chart. burndown chart. Explain how to adjust upcoming sprints based on the burndown. List 3 critical information obtained from a burndown chart. Understand 5 common errors that lead to misleading information in burndown charts. Topics covered Definition Why and when to use a sprint burndown chart Information obtained from sprint burndown chart Take part in the ball point game and understand the in-depth concepts of release burn-up charts and once the sprint is completed. What you will learn At the end of this activity, you will be able to- Understanding the current status. List 2 differences between burndown and burn-up charts. Explain how to adjust release planning (if needed) based on the burn down. Tell one primary advantage of a burnup chart over a burndown chart. Topics covered Definition Features How to create a release burn-up chart (steps) Topics covered Definition Features (or) Minimum Marketable Features Minimum Viable Products Be a part of the Lego Building Blocks game wherein participants will be asked to write user stories for every activity involved. The game will entail 3 iterations and attendees will prepare user stories for every activity involved. activity, you will be able to- Define and explain user stories and understand the importance of user stories in real-time projects. Explain the 3 Cs in user stories in real-time projects. Explain the 3 Cs in user stories and understand the importance of user stories and understand the importance of user stories in real-time projects. stories INVEST criteria Learn more about the "what" and "how" of Agile estimation with our in-class Agile board game "Scrumble". In an interactive setting, this game will let you analyze the common challenges faced by Scrum team members during implementing different estimation techniques in Agile. What you will learn At the end of this activity you will be able to- List and demonstrate 5 benefits of Relative Estimation and Planning Poker. List and explain 3 common mistakes made while using Relative Estimation and their negative impacts. Discuss in detail the 5 critical steps in Planning Poker. Topics covered Definition Benefits of Agile Estimation techniques Know everything about planning poker from our popular poker card estimation techniques Know everything about planning poker from our popular poker. are revealed, the values need to be discussed. What you will learn At the end of this activity, you will be able to- List 5 benefits of planning poker estimation technique. Decide the best sequence for the values (story points) on cards for your real-time projects. Discuss in detail the 5 critical steps in Planning Poker. List 3 points to heed for employing planning poker for distributed teams. Topics covered Definition Benefits Participants How to play planning poker Planning poker rules Enroll your Group Now A Certified to lead the project teams effectively. The Scrum Master is considered to be a team facilitator rather than a project manager, as he/she facilitates the daily tasks for the team members. The primary role of the Scrum Master includes a set of roles and responsibilities of the Scrum Master: Act as a facilitator and servant leader who encourages self-organization Remove obstacles so that the team can focus more on work and follow practices of Scrum Protect the team from internal and external distractions Ensure a good relationship between the product owner and the team along with the members outside the team along with the team along with the team along with the team along the scrum team Conduct retrospective meetings Address team progress Scrum framework allows teams to strategize and execute business decisions in line with Agile principles. This functionality has increased the popularity of the Scrum framework worldwide. A CSM certification is an indication of your capacity to complete Scrum projects in time. Certified ScrumMaster® (CSM) has been taught by a Certified Scrum Trainer (CST) the Scrum terminology, practices, and principles that will enable him or her to act as a Scrum Master or Scrum terminology, practices, and principles that will enable him or her to act as a Scrum Master or Scrum terminology. education. No, there is no such online/virtual course for CSM. According to the Scrum Alliance, it requires a greater level of personal interaction that can be delivered in a virtual domain/environment. With the 2-year membership with Scrum Alliance, it requires a greater level of personal interaction that can be delivered in a virtual domain/environment. With the 2-year membership with Scrum Alliance, it requires a greater level of personal interaction that can be delivered in a virtual domain/environment. discounts on meetings, and additional member-only resources. Moreover, CSMs can use a specially designed logo to spotlight their credentials. According to Scrum Master course helps to increase the likelihood of a project's overall success by applying Scrum principles and techniques. By understanding the values, practices, and applications, you can act as a 'servant leader' rising above and beyond an average project manager and helping your organization achieve meaningful goals. Scrum, as surveyed by VersionOne's State of Agile report. LinkedIn also included Scrum Master in the Most Promising jobs list of 2019 and Agile and Scrum are the most in-demand skills required to get a job in your dream company. After the CSM certification, an individual can get rewarding job opportunities as 63% of the respondents are experiencing the success of implementing Scrum framework to deliver high quality products. A certified individual can efficiently take on designations like Business Analyst, Lead Software, Engineer, Project Manager, Information Technology, Staff Scrum Master, Delivery Lead, In today's technology age, job opportunities are continuously increasing in number which in turn rising the demand for professionals and skilled Scrum Masters. Certification is the best way to convince the employers that they are offering the role to the right candidate. Our CSM training will increase your visibility to potential employers. methodology, 15 years after its initial release. Due to this, Scrum Masters are in high demand. Companies are benefiting a lot after becoming Agile. With the increase in demand, companies are hiring more Scrum Masters, offering plenty of job opportunities in organizations. by HP Enterprise- "two-thirds (66%) of the participants depicted their organizations as either Pure Agile or Leaning towards Agile. On the other side, only 9% of the organizations described themselves as pure Waterfall or Leaning towards Agile. professionals in New York: Integral Ad Science- an American private technology company that analyses the value of digital advertising placements. American multinational financial services corporation focusing on businesses like charge card, and traveler's cheque businesses. She started with her specialization in Agile and Scrum back in 2005, where she was responsible for Agile transformation and implementation of Agile and Scrum to many companies and teams. She works as Agile coach, counsellor, consultant and trainer for both large and small organizations. As an Agile expert, she is sought after as a regular speaker at Agile international conferences. She is also a founder of the Agile Prague Conference (agilepraque.com). Kok Ewe ('KE') Siew is an Agile Coach & Certified Scrum Trainer. KE has been involved in many product development engineering manager, but in 2009, he decided that he had had enough of the problems repeatedly encountered by product teams as a result of the waterfall approach to product development. KE decided to join in on a mission by a small group of Agile champions to transform the mindset and culture of the semiconductor giant to Agile, one small team at a time. He became a full-time ScrumMaster/Agile Coach, and started coaching and training Scrum teams. KE is today a recognized pioneer of the Agile community in his home site, Intel Malaysia. Agile adoption is gaining momentum in the corporation, and KE spends most of his time nowadays mentoring product teams and their managers to help them with their Agile transition. KE has conducted many Scrum workshops teaching Agile principles/values and Scrum practices to new teams. He emphasizes on the importance of the 'Agile mindset' as this greatly facilitates the adoption process. Many of the teams he has trained have successfully embraced Agile thinking to achieve great business results. KE's qualifications include a Bachelor of Electrical Engineering (1st Class Honours) from the University of Melbourne, Australia; a Master of Business Administration from the Heriot-Watt University, Scotland; and a Master of Science in Manufacturing Systems and Technology from the Nanyang Technological University, Singapore, under the Singapore-MIT Alliance programme. Mail Us support@knowledgehut.com TOP THINGS TO CHECK WITH AN INSTITUTE BEFORE HIRING THEM FOR IN-HOUSE CERTIFIED SCRUMMASTER? TRAINING IN NEW YORK An organization arranging in-house training by taking up the ScrumMaster? certification cost in New York is not something new. Make sure you choose reputed institutes like KnowledgeHut for the training in New York in a institute before hiring them for in-house training. Trainers The training in New York in your campus should be experienced in industry standards and also should have experience in training students at various career levels. The trainers are available with institutes that are reputed and accredited with Scrum Alliance? like KnowledgeHut. Scrum Alliance? provides certification to training materials are also an important factor. The learning materials provided by the training center can be either e-learning materials or online study guides and need not be highly priced and voluminous study books. The course material should be useful for the certification exam and also for learning beyond the classroom course for practical training. Every institute would provide some kind of study material but, you should choose an institute for CSM? course in New York that would provide high guality study materials which are approved by Scrum Alliance? like KnowledgeHut. Course just for the sake of increasing the CSM? certification cost in New York. The course length, agenda and other elements of the course should be provided before registration. Only reputed institutes in New York like KnowledgeHut have pre-course and post-course support where you can get in touch with the representatives to learn more about the course. Accreditation from Scrum Alliance? An institute cannot become accredited with Scrum Alliance? without any benchmarks. The organization would audit the quality of the training institute from time to time. Thus, the quality of training from an institute that is accredited with Scrum Alliance? like KnowledgeHut can be trusted to be high throughout the course. This is the main reason as to why people prefer institutes with accreditation with Scrum Alliance?. For Corporates
