Once satisfied, its proprietary Broadcom driver will be acquired, the firmware internal will be downloaded, checked out and installed. You need an internet connection. It must be downloaded and extracted, which can be done from the `firmware-b43-installer`, `firmware-b43legacy-installer` or `firmware-b43-lpinyin-installer` packages during their installation. The `b43`, `b43legacy`, `brmcsmac`, and `wl` drivers do not support any USB devices. Drivers there are more 'drivers' that support Broadcom wireless LAN chips. To download and blacklist: `modprobe -r b43 b43legacy echo -e blacklist b43blacklist b43legacy >> /etc/modprobe.d/local.conf` installation. The kernel module and installation. NDIS drivers are described on the `NDISWrapper` page. The firmware is not packaged by the Debian Project. `b43` and `b43legacy` These drivers are included as modules in the Debian kernel images. This is an alternative solution for devices not supported by the Linux kernel, such as Broadcom wireless chip-based USB devices (other than the BCM4320). Configure wireless network interface card (NIC) drivers. For devices with a BCM4320 revision 3, BCM4311, BCM4318, BCM4321 or BCM4322 chip, install the `firmware-b43-installer`. For devices with a BCM4312 LPHY chip (PCI ID 14E4-4315), install `firmware-b43-installer`. apt-get install `firmware-b43-installer`. apt-get install `firmware-b43-installer` For devices with a BCM4301 chip or BCM4306 revision 2 chip, install `firmware-b43legacy-installer`. install `firmware-b43legacy-installer` A PCI ID check will be performed. The affected driver has built-in logic to probe the actual For example: `b43-ph0y: WLAN Broadcom 4306 found (basic revision 5)` For more information, see . Lack of firmware is the usual reason for "SIOCSIFFLAGS: Error message "File or directory does not exist." The .net speed test result went from ~50Mbps to 220Mbps. See also `CategoryHardware | CategoryWireless` I know this is the hackintosh group, but I think you will have a better understanding of the hardware and what works compared to the Apple community at large. I have a 27" iMac 5K running Windows 10 on the bootcamp, but the Wireless Broadcom drivers (7.35.118.46) are invalid and have a maximum limit of about 60Mbps. My 802.11ac network card shows a BCM43XX series device, but I tried some Dell drivers without any luck.
