Android open docx file

Edit files using Office Compatibility Mode (OCM) To open and edit Office files, you can use Office Compatibility Mode (OCM). With OCM, you can open and edit Office files in Drive, the Docs, Sheets, and Slides homescreens & apps, and Gmail. On your mobile device, OCM is automatically included with the Docs, Sheets, and Slides apps. When you open an Office file in one of the apps, you'll be able to edit it. Source: A bit of extra info: Opening a Word document on Android just so you can read it is incredibly simple. Since Android natively supports opening .doc and .docx files, all you have to do is click on the file to open your Word document. Find the file you want to open. Tap to open the file – if prompted, open it in Google Drive or Google Docs if you have them installed already. You're now able to read the document. To edit it, tap the small pencil icon in the bottom right – now you'll be editing the file. If you'd rather not use Google Drive or Google Docs, download Microsoft Office Word for Android and use that instead. DOCX format is the current default format of Microsoft Word. It is a newer upgraded version of the old DOC format which has replaced it and is gaining more and more popularity as the main method of saving text contents. This file format is open by default with Word, and it can be compatible with other applications on both desktop computers and mobile phones and tablets. Our daily routines often require working with different documents somewhere on the way, and it is important to find how to open DOCX file in mobile devices.There are many solutions for Android phones and tablets, we recommend FullReader.FullReader is an app which supports all popular digital document formats. It was created as an ebooks reader for Android, thus, it can open large DOCX files containing graphic objects and treat them smoothly.How to use FullReader to read DOCX files on AndroidGet FullReader from Google Play, install the application on your phone or tablet and run it about the location of main settings menus for the user. Open the side menu and perform scanning to pick the necessary files up.There will be all formats supported by this application listed, uncheck the ones you won't need.Select the file you want to read on this Android device and tap it to open.The toolbar at the bottom of the window provides means for additional adjustments, and there is the Quick settings menu. It is located in the top-right corner of the book-reading window.Using that menu users will be able to change the page appearance according to their personal preferences for more convenient reading and work.If the DOCX files are archived in ZIP, RAR or 7z, FullReader for Android will read them, too. There is no need to look for another archiver app and unpack the files before reading.Search for those archived files saved in the memory of your phone or tablet. FullReader does not scan for such archives automatically.To find these archives, go to the Explorer file manager in Home (available from the side menu).Browse to the folders where the requested items are stored.Tap the archive to open ZIP or RAR.Now you can read DOCX files directly on your Android mobile device.How to use the file manager in FullReader to find and open DOCX items on AndroidFullReader has a convenient built-in file manager aimed to help users to work with different files saved on the Android device.After the scanning process, all found results are automatically gathered in All books section of Explorer.You can sort these items to find the necessary document faster, for example, sort by the type to see all DOCX items at once. Then, as in all other sections of the application, tap the file to the section of My library.Also you can refer to the section of My library, it contains all files sorted by different criteria.Swipe the names of sections at the top of the window to the left and get to All formats. Then tap the "DOCX" section to view all documents of this format.FullReader can open DOCX on Android phones and tables and provide additional options to work with these Word documents. Users can change the appearance of the documents to read them more conveniently, add notes, translate separate words and phrases into different languages. FullReader for Android is a very powerful and multi-functional solution, it is really worth trying it. The best place to buy movies, music and apps for Android Do all your money management from your phone Buy and sell cryptocurrencies with this app Manage your accounts and payments conveniently with Google Pay A revolutionary new way to make payments in India Easily make payments in India Group video conferences compatible with Cisco tools Manage your Facebook page from your Android File Type File Information Common FilenamesHow to Open DOCX file open in Microsoft Word 365 DOCX files store data in the Open XML Document format, which was introduced with Microsoft Word 2007. It replaced the .DOC file format as the standard format for saving documents in Word. Unlike DOC files, which store document data in a single binary file, DOCX files save data as separate files and folders in a compressed Zip package. Within a DOCX file are XML files and three folders: Word, docProps, and _rels, which store the content, document properties, and relationships between the files. The Open XML format is designed to make document content more open and accessible. For example, document text is saved in plain text files, and document images are stored as individual image files, such as .JPG or .PNG, within the DOCX file. The included files may also contain page formatting information, authorship data, and document review notes. NOTE: To explore the contents of a DOCX file, rename the .docx extension to .zip and then decompress the resulting file with any Zip decompression utility. You can open a DOCX file with Microsoft Word in Windows and macOS. Word is the best option for opening DOCX files because it fully supports the formatting of Word documents, which includes images, charts, tables, and text spacing and alignment. Word is also available for Android and iOS devices. You can also open DOCX files with other word processors, but some of the formatting of the original documents may be lost. Alternative word processors that support DOCX files include Corel WordPerfect (Windows), Apple Pages (Mac), and Apache OpenOffice Writer (multiplatform). You can open DOCX files with various programs online. Google Docs is a free web application that allows you to upload a DOCX file and view, edit, save, and convert the document. Open and view .DOCX files with File Viewer Plus.Free Download © 2021 Sharpened Productions | Terms of Use | Privacy Policy | About | Contact Using Google Docx increase your office work productivity a lot. It is commonly set and goes on your computer. But when you are on the way to travel or not feeling handy to open up your laptop, then your smartphone may operate it with silly stuff. Hence, Therefore, you must come to know the hacks on how to open a docx file on Android. To know the way, we suggest you understand first the functionality of a Google Docx. We spotted it something more interesting to use the docx on your android phone other than the MS word. Previously, the Word file would be the only competitor and make a monopolistic competition, and now Google is keen to make the Google Docx effective compared to the MS Word. And, guess why people now opt for a Google Docx? Well the only reason we sort out is to enjoy the offline mode editing and once it gets connected with the internet connectivity the Docx automatically saves the file no matter you have forgotten to save yourself. How to open Google Docx using Apps If your Google docx won't opening up by default, then most probably you need to run the application after transmitting it to another app. Yes, you heard well, that you are going to open the data of that particular docx file to another app. To do so, all you need to do is to tweak the settings with that particular app so the app will redirect all the data from the Docx, and show you up in no time. Keeping this mind, we find some of the effective apps that will allow your Google docs to run so let's dig deep into them below: 1 .Open Google Docx using MS Word As long as you grab the phone which has an MS Word application, then there is no matter to get tensed about opening Docx. Using the Word file and opening up the Google Docx would be somewhat the best alternative right away! It sounds different to open a file using MS Word but no worry the app is committed to do so. Microsoft has a greater Office management ecosystem so it may easily run the other sort of file as well. Most of the business class people so tend to use the application as it performs with versatile features to them. The in-depth analysis of the Androids Office management the MS Word on the go and more popular now. Therefore, they let the window open to grasp all of your information out of Docx. Maybe the Google Docx may not compatible or friendly to all devices but the Word app is great to go for it. Finally, the core point is how to open a Docx file in Android and the answer lies in one simple process. Now have a look at the image below to get the answer here. Now you get it through, right? So to do so, you just need to go to the Settings>>Documentation Settings>>Create Word files 2.Docs Viewer : If you are alien to the previous system or don't want to see your Google Docx runs on MS Word then try out with this app. The Docs Viewer is a user-friendly app, and the reason to run this app because you can easily use it without tweaking the settings from Android. Simply download the app and see how it may run the Google Docx file. 3.WPS : WPS is a great app both applicable for the mobile and desktop. It comes with so many features and you may have it on your android in order to find the Docx text within it. To do so, you just need to open the WPS software on your Android mobile and tap on the Docx file, surprisingly the docx file will appear on to that software without setting up the function. FAQ What will open a DOCX file? Open Docx online using many online apps however all of them are not trustworthy but the best pick would be using MS Word 2007 version. Microsoft Office is nearly ubiquitous in the world of business and education alike. While similar apps like Google Docs and Apple Pages have given Microsoft a run for their money, it's safe to say that Word continues to lead the pack in features and usability alike.The downside of this, of course, is that some Word documents are difficult to access depending on your OS. If you're trying to open a '.doc' file on your Android device, you may have issues running it right out of the box. Don't worry, opening doc files is a reasonably straightforward process. Here's how to do it.How to Open a Word.doc File on AndroidThe Google Play Store is one of the most diverse app stores available to tech users today. This means that there is no lack of applications designed to help you open Word documents on your Android device. Most of these apps are free, some are pre-installed, and all of the ones on our list have been tested for use in May of 2021, so you know it's a good app.Use Google DocsGoogle added native support for both '.doc' and '.docx' files in Android, so opening a new file shouldn't be too much work. Here's how to do it.Use Google Drive, your email, or another service to find the Word document.Tap the file you located in step 1 above to open it. If prompted, open the file in 'Docs' (Google Docs) or a different doc/docx file viewer/editor if you have it. You may need to install one of them if nothing comes up to select or reset the default app launcher if you don't get any options like the image below.The document should open in whichever app you choose. If you're simply trying to review the content, opening it in Docs is fine. If you'd like to make edits, you should open it in a different app, such as Docs To Go. Using Microsoft Word for AndroidGoogle Docs can take care of opening and displaying your files on Android, but if you'd prefer to edit them natively, you can use Microsoft Word for Android.Grab the Microsoft Word app on the Play Store.Once the app finishes the installation process, tap the '.doc' or '.docx' file on your phone, then select "Word" from the list of apps available.Word makes it easy to save and edit documents on Android, so edit your docs to your heart's content. However, it is certainly better to use the PC or Mac Word program whenever possible.You can also use the entire Microsoft Office Suite on your Android device, as long as you have the applications installed. Although it isn't easy to edit files, especially an Excel document, Android and Microsoft seem to work well together.Word for Android is a free application with no advertisements and you don't need an account to get to work. Unfortunately, if you don't have an account you can't open anything from the cloud so it is best to sign in if you need to access files from your PC on your phone.Polaris Office for AndroidPolaris Office comes with advertisements on various Android devices, but if it isn't there already, simply download it from the Google Play Store. Developed by Infraware Inc., Polaris is a free application and you can bypass the option to create an account if you'd like. Upon opening the app, you'll need to click on the three horizontal lines in the upper left-hand corner and tap on 'Device Storage' to access files on your Android phone or tablet. If nothing appears, head over to your device Settings and toggle the permissions on under the 'Apps' tab.Now, you can edit and download the file directly to your device and send it where it needs to go. Note: You may notice that this app does have ads that can get in the way of your document. Especially the banner at the top as shown in our screenshot above. There are a few ways to work around these ads. The app offers videos that you can watch to do away with ads so you don't have to pay for a premium service. A 60-second video will remove the advertisements.You can also tap on the 'Edit' icon which removes the banner ad at the top. Or, you can turn on Airplane mode, then open your document. If you're already looking at the document, go back, then turn Airplane mode on. When you open the document, the ads will go away.WPS OfficeAnother free application you can easily download from the Google Play Store, WPS Office offers everything from the conversion to reviewing Microsoft Office documents. Similar to Polaris Office, you don't have to create an account to use its features.This app does offer a premium paid service that removes ads and gives you even more functionality. At the time of writing, the service is 40% off at $19.99 per year and $29.99 each year after that. All you need to do to get started is tap on 'Open' at the top of the screen to edit them natively, you can tap on any number of file categories you'll tap on Doc for the purposes of this article) and choose the file from your device's storage.Once open, click the 'Tools' option at the bottom to make edits. WPS Office offers its own cloud service if you'd like to store your work within the app. Of course, you can also share the document with others or even directly to a computer (but you will need an account for that last bit). Can't Open a Word DocumentIf you're having difficulty opening a Word.doc file the first thing you'll want to do is try another app. If it's a pressing matter, Google Docs or Word Doc may not cooperate at first.Using another application should correct the issue as long as the file that you're trying to open isn't corrupted. If you've tried using another application the file is likely faulty so try getting another version of it.If you absolutely need to access a file from the Word app, you may have a compatibility issue. Either your phone's software is out of date, or your app is out of date. Check the Play Store for updates first. If an update is available, go ahead and click on the option to do so. Once done, try opening your file again.Assuming you're running the latest version of Word, try updating your phone by going to the Settings and tapping on 'Updates.'If all of your software is up to date, you can try clearing the cache (Settings>Apps>Word>Clear Cache), or uninstalling then reinstalling the app. Some users have reported there's only the option to uninstall Word from the Settings on their device. If this is what you're seeing, go to the Play Store and see if the option to Uninstall is there. When the option doesn't appear to uninstall the app, you can only disable then re-enable it.Lastly, try signing into the Word app with your Microsoft account if you aren't already logged in. This may correct your problem (especially if you're uploading a document from the cloud). Frequently Asked QuestionsHere are some more answers to the questions we're asked most often about Docx files and Android. Can I edit a Word doc on my phone? Yes. Google Docs and the third-party applications you've mentioned above should let you edit your document with no problems. If it's a read-only file, you'll need to click on 'Attributes' and uncheck the 'Read-Only' box. From here you can make changes, make notes, and perform various other tasks. Once edited, feel free to share the file, save it to your cloud, or send it to another person. Which is the best third-party app to use with Word docs? The answer to this question largely depends on what you're trying to do with the document. Word is more compatible because it is Microsoft's software. Google Docs gives you a lot of freedom and it's much easier to share your document with others. The other third-party apps listed offer some key features too. Can I save documents to my OneDrive account on Android? Absolutely! You have the option to add your Microsoft account to the Microsoft Word app on Android. When you open a file you can select the three dots in the upper right-hand corner, then select 'Save as' and choose your file location.If you're creating a brand new document all you need to do is select your OneDrive account from the dropdown menu at the top of the creation page.
